## WHY ME

1. I went through majority of IT positions in the SW development life cycle from a developer, via team lead, analyst, solution architect, tester, project manager, product manager with tight link to business.
2. I experienced the hard work on every such position which helps me to understand the needs in co-operation with all these working positions.
3. I am driven by curiosity and taste for learning new things which shrinks scope of the "impossible" to a very tiny box. Especially in the IT development and SW solution delivery.
4. I am mostly interested in complex tasks the others give up on, and fine people around keen on accept challenge to achieve the goals.
5. **I can and I do translate business language to the language of developers and vice versa.**
6. I am a communicative person.
7. I am systematic and organized.
8. Future interest: Cyber Security Architecture.

## OBJECTIVE

- **IT Analysis** (I love that) of software solutions or/and solution proposals.
- **Solution architecture** (I love that) to help business grow and development to understand.
- Business analysis for estimating the ROI.
- **Product definitions** in co-operation with Business.
- Translation of the business needs into IT language – creating technical assignments and documentation (I love that).
- **Project management** for project fulfilment and product delivery management.
- Coordination of international teams on (site/remote).
- Negotiation with vendors and suppliers related to the SW solution delivery.
